GE VERNOVA

Prohibited and Restricted Commodities for Import into China

For GE Onshore Wind Suppliers

This chapter outlines goods that are prohibited, restricted or subject to special licensing requirements for import into China, tailored to the GE Onshore Wind equipment supply chain. Suppliers must confirm that prohibited or restricted materials are NOT included within wind shipments.

1. Prohibited Items (Not Permitted for Import)

These goods are strictly banned for import into China and must not be packed together with wind equipment:

- Used mechanical and electrical equipment listed on China's prohibited used machinery catalog. Scrap or end-of-life wind components are not allowed.
- Hazardous waste, contaminated materials, waste oil and dirty packaging debris.
- Raw unprocessed timber or untreated solid wood without approved IPPC pest treatment.
- Products containing ozone-depleting substances (ODS) prohibited under China environmental regulations.
- Counterfeit goods and items infringing intellectual property rights.
- Soil, sand, plant debris, live pests or insect residue attached to equipment or packaging. All equipment must be fully cleaned before loading.

2. Restricted Items (Require Pre-Approval / License Prior to Shipment)

These items are not fully banned, but require advance review, certification or official permits from GE China before shipment departs the supplier facility:

- Specific electromechanical wind components requiring the Automatic Import License issued by China MOFCOM. GE China will evaluate the HS code and apply for the license in advance; suppliers must supply full model, brand and functional descriptions.
- Electrical products falling within the CCC product catalogue: valid China CCC certification must be in place before import.
- Dual-use controlled items: If components contain dual-use characteristics, end-use and end-user documentation must be reviewed and approved before shipment.
- Hazardous materials including batteries, lubricants and dangerous chemicals: Must follow China dangerous goods import regulations, with valid MSDS, transport declarations and compliant UN packaging.

3. Phytosanitary Special Restrictions

Solid wood packaging (pallets, crates, dunnage) must comply fully with ISPM15 IPPC requirements described in the prior section. Bark-containing timber or untreated raw wood will be rejected at China border inspection.

4. Supplier obligation

Suppliers must confirm all shipped goods are new and match the approved technical specifications. Notify GE China at the earliest opportunity if any component may fall under restricted commodity controls. Do not ship restricted items without written confirmation from GE China.
