

GE VERNOVA

GE Vernova in Taiwan

Our presence

For more than six decades, GE Vernova has been part of Taiwan's development. Today, our businesses in Taiwan employ more than 200 people, and our installed base of over 30 gas turbines contributes 8,000+ MW of capacity to the region's power grid.

Beyond our role in the power sector, we continue to contribute to Taiwan through long-term efforts in education, community engagement, and environmental action.

Inspiring the Next Generation through Education

At GE Vernova, we embrace the opportunity to help prepare the energy workforce of the future. GE Vernova works with local institutions to engage Taiwan's youth and encourage interest in energy, science, and innovation.

In 2021, we launched the GE Innovation Challenge in Taiwan, the program's first stop in Asia. In partnership with the Taoyuan City Government and Taiwan Power Company, the challenge invited students, entrepreneurs, and members of the public to share ideas on energy supply, decarbonization, and energy efficiency. The initiative received 116 submissions, and six winning teams were awarded prizes to further develop their concepts.

Since 2023, we have collaborated with National Sun Yat-sen University (NSYSU) in Kaohsiung to host the Energy Workshop. Across three events, this two-day program has brought together more than 100 undergraduate and postgraduate students

from diverse disciplines to discuss energy transition and climate-related challenges.

In 2026, under the theme "Powering a Better Future," we developed a tabletop exercise that allowed students to simulate complex decision-making in the context of a changing energy landscape and evolving geopolitical dynamics.

2026 GE Vernova x NSYSU Workshop

GE Vernova also supports younger students through the 2023 Miaoli Donghe and the 2026 San Wan Daping Elementary School STEM Science Camps. Featuring hands-on activities such as building wooden magnetic couplings, we introduce children to foundational science concepts in an approachable and practical way, helping spark curiosity from an early age.

2021 GE Innovation Challenge

Advancing Environmental Sustainability through Action

Education helps shape future possibilities, but care for the environment also requires action in the present. In Taiwan, GE Vernova has taken part in local environmental efforts over the years.

Back in 2011, we collaborated with local NGOs on a beach cleaning project to help address shoreline pollution. In September 2023, we independently carried forward this work in Taoyuan, expanding our efforts to support a cleaner coastal environment and demonstrate our ongoing dedication to environmental stewardship.

In 2025, we participated in the Shell Ginger Tree Planting Event with the Hsinchu Gaia Nahuy Workshop, where GE Vernova colleagues helped plant native Taiwanese shell ginger. This activity supported biodiversity awareness and highlighted the importance of preserving native species.

Supporting Local Communities with volunteering

In addition to education and environmental efforts, supporting local communities remains integral to our business operations in Taiwan.

In 2024, we held a Rice Harvest Event with Yoga Farm, supporting an organic rice cultivation project that prioritizes sustainable farming practices by avoiding synthetic agrochemicals and fertilizers. The initiative also carried a charitable purpose, with the harvested rice distributed to the Waiting Child Council of Social.

We also work alongside our customers to give back to the communities where we operate. In 2026, we partnered with independent power producer Chia Hui Power Plant to support a charity fair organized by the Ruo-Zhu-Er Foundation in Chiayi. Proceeds from the event directly supported the foundation's mission to enhance the development and quality of life of people with disabilities.

These efforts reflect how we continue to contribute in Taiwan: not only by helping meet energy needs, but also by taking part in the broader progress of society. GE Vernova remains committed to being a thoughtful and reliable presence in Taiwan for years to come.
