Model Similarity:

The control modules MPU55, MPU56 and MPU57 are integrated stand-alone computers that run the application code and provides a universal control platform for the Nexus system, according to the firmware loaded on the controller.

The Nexus I/O bus & power extension module MCD50 provides the electrical interface between the IO modules and the controller's I/O bus (iLink), as well as the cabinet's DC power system.

Each I/O module contains a processor circuit which is common to all Nexus I/O modules. The Nexus analog input modules MAI50, MAI51, MAI52, MAI53, MAI54 and MHT50 contain a processor subsystem and an acquisition circuit specific to either temperature input function or any other analog input function.

The Nexus analog output modules MAO50 and MHO50 contain a processor subsystem and an acquisition circuit specific to the analog output function. Most analog output channels can provide current output with signal range from 4 to 20mA, while some can be configured for 1-5V dc output.
