

PARTSMART* MANAGED INVENTORY PROGRAM

Overview

GE Vernova's PartSmart is a managed inventory program developed to help you reduce risk and costs associated with spare control system parts. Through a subscription model, you gain guaranteed access to critical replacement parts held by GE Vernova at a central stocking location, aiming to ensure your system reliability while reducing capital investment and obsolescence risk.

The Challenge

Managing adequate spare control system parts inventory while controlling costs is a persistent operational dilemma. You must balance the risk of parts unavailability against the cost of holding excess inventory that may become obsolete—directly impacting your downtime costs and total cost of ownership.

The PartSmart Solution

PartSmart eliminates this trade-off through a subscription-based model that gives you guaranteed access to a defined set of control system parts held by GE Vernova, with rapid fulfillment—typically same-day availability for pickup. You benefit from flat annual pricing, warranty coverage that begins when you receive the part, and proactive obsolescence management across your subscription period.

Supported Systems

Mark* V, Mark VI, Mark VIe and Mark VIeS turbine control systems; and EX2100 and EX2100e excitation systems; and LS2100 and LS2100e starter systems.

Key Benefits

Risk Mitigation

- Guaranteed critical parts availability when you need them
- Reduced obsolescence risk for aging control system components
- Maintained warranty coverage on acquired parts

Cost Reduction

- Decreased capital investment tied up in spare parts inventory
- Lower carrying, storage, and handling costs
- Predictable annual pricing with no mid-year supply chain fluctuations

Operational Efficiency

- Shortened maintenance and repair cycles through rapid parts access
- Reduced lead times vs. traditional procurement
- Improved confidence in planning outages and corrective work

PartSmart is available as part of our Controls Lifecare Services multiyear agreements, or as a stand-alone offering if you're optimizing your existing system inventory. To get started and find the package that meets your needs contact your GE Vernova Sales representative.
