

DWatch

The Smart Operating Mechanism

In the digital era, the DWatch mechanism is the logical evolution of the traditional CMM mechanism, combining advanced software with the hardware characteristics and benefits of the original.

Intelligent Disconnecter Monitoring and Control

DWatch performs permanent real time monitoring of the operational parameters of disconnectors and records all operating curves locally.

The DWatch also controls the speed of the live part during opening and closing in a specific and programmable manner for all disconnector types. These profiles can be easily set by internal dip-switches. Such control helps in always having a constant operating time in different conditions of power supply and load.

Secured on-line communications easily integrate into customer IT architectures to deliver relevant data to Maintenance Managers, Asset Managers and Network Operators.

The DWatch mechanism provides an exhaustive real time condition assessment of critical disconnectors with incipient failure detection features to reduce the chances of catastrophic equipment failure and preserve network performance.

DWatch records information coming from the sensors installed on the disconnector and analyses it with standard models programmed into the system.

The new digital DWatch

renders all disconnectors inside the substation more intelligent and is fully compliant with IEC 61850.

Customer Benefits

- Continuous on-line monitoring and control of mechanical parts and live part temperature
- Early detection of excessive wear and tear according to actual health
- Flexible configuration
- Improved reliability, extended lifetime and predictive maintenance
- Scalable solution

Technical center architecture

DWatch Mechanism Features

Stainless steel box	✓
Irreversible gearbox	✓
IP55	✓
Emergency crank	✓
Padlockable front door	✓
Digital communication plug	✓

DWatch Mechanism Characteristics

Robust design for all environmental conditions	✓
Easy wiring	✓
Reduced maintenance costs	✓
Variable speed during operations	✓
Suits any motor supply voltage	✓
Time operation not voltage supply dependent	✓
Modularity to suit all installations	✓
Lubricated for life	✓

DWatch Electronic Board

SPVL disconnecter type with DWatch mechanism installed

Example of Control Dashboard with DWatch

Digital Communication

Many sensors are integrated in the disconnecter which communicate with the substation in digital standard IEC 61850 via fiber optics.

- The patented US 9,071,190 B2 solution also offers the possibility to propose a remote substation diagnostics service.

Benefits

Disconnecter maintenance planned in advance as necessary and early detection of eventual malfunctions. In fact, the disconnecter only requires maintenance due to its effective load level, with the consequent benefits in terms of costs as well as optimizing overload management of the electrical network.

DWatch Technical Specifications

Voltage input			
Power supply	Vdc/Vac[V]		70-250/50-400
Auxiliary supply	Vdc/Vac[V]		60-375/85-265
Environmental condition			
	Tmin/Tmax[°C]		-40/+55
Optional relay output			
	n°/Imax		5/5
Mechanical data			
	Interface		120x300
	Weight		80 kg
	Main dimensions (bxhxd) [mm]		550x750x550
Equipment reliability			
	MTTF[yr]		60
Interfaces			
	Digital	Analog (typ)	RS-232/RS-485/IEC 61850 8na+8nc
EMC			
	IEC 62271-102 par 5.18		
Software			
	1 x client license		
PC requirement			
	Operating system		WIN XP or better
Web server			
	Embedded (opt)		Configurable

Standard dimensions. Different sizes available upon request.
