Grid Solutions

MM2 & MM3 to MM300 Retrofits

Replace old MM2 and MM3 Relays with the Multilin™ MM300 Motor Management System

Taking advantage of new technologies and the advanced Multilin thermal model for motor protection, the Multilin MM300 Motor Management Systems offer substantial capabilities, flexibility and control functions, as compared to Multilin MM2 and MM3 relays. In particular, GE's Multilin MM300 Motor Management System devices offer advanced features through the combination of several functions such as advanced communications, automation, control and metering capabilities, all in one device.

The MM300 integrates protection, control, automation, metering, diagnostics, and multiple communication protocols all in a rugged compact device for low voltage motor protection & control applications. Designed for NEMA and IEC Motor Control Centers, the MM300 delivers superior protection and control to extend motor life and maximize process uptime.

Key Benefits

- Full-featured protection for low voltage AC motors
- Advanced automation capabilities for providing customized protection and integrated process control
- Advanced FlexLogic™ reduces requirement for local controllers
- Reduced space requirements through integration of multiple devices
- Enhanced troubleshooting tools including sequence of event records and waveform capture
- Powerful communications including Serial, Ethernet, Profibus, and DeviceNet protocols
- Small form factor and remote display options designed to fit various MCC buckets
- Universal device for all motor power ratings
- No CTs required for less than 5A motor ratings
- Thermistor input to monitor the ambient or motor temperature
- Support for Hand Held Display (HHD) that provides a graphical color local interface allowing local operators to view and change setting files and quickly access relay diagnostic information

Applications

- Low Voltage three phase AC motors
- MCC or stand alone panel mount applications
- Process control and applications requiring Automation or Control i.e. conveyor systems or well recovery pumps
- IEC or NEMA class motors and Motor Control Centers (MCCs)
- System architecture requiring multiple simultaneous communications
- Applications require full-voltage reversing or non-reversing, two-speed, wye-delta open transition, inverter, soft starter or autotransformer motor starting

Protection and Control

- Enhanced Thermal Modeling
- Mechanical Jam & Stalled Rotor
- Undercurrent & Underpower
- Acceleration Time & Current Unbalance
- Ground & Sensitive Ground Fault
- Phase Overvoltage / Undervoltage
- Thermistor & RTD Overtemperature

Automation

- Programmable Flexlogic™ option
- Starter Control & Process Interlocks
- Programmable inputs and outputs
- Undervoltage Auto-restart

Monitoring & Metering

- Metering - current, voltage, power, energy, frequency, RTD & Thermistor
- Oscillography (analog values at 32 samples/cycle and digital states) & Event Recorder (256 events)
- Advanced device health diagnostics

Communications

- Two Wire RS485, RJ45 Ethernet
- Programming Ports - USB, RS485 & Ethernet
- Multiple Protocols (Modbus RTU or TCP/IP, internally or externally powered Profibus, ODVA compliant DeviceNet)

EnerVista™ Software

- Simplify setup and configuration
- Strong document archive/management system
- Strong maintenance and troubleshooting tool

MM2 to MM300 Ordering

	MM2	*	*	*	*		MM300 Matching Order Codes
Base Unit	MM2					Basic unit	MM300
Mounting		PD				Panel Mount with display (only when both option 1 and 2 are selected	G: Graphical Control Panel with USB
		C				Chassis Mount (Black Box)	X: No control panel or display
Option 1			1			Option 1 : Example: MM2-C-0-2-120/240	Suggested order code based on the example: MM300-GEHS-1-C-A-C-C-X-X
						Process control (4 inputs), 10 programmable switch inputs, 2 extra electromechanical relays (Aux1 and Aux2), 4 to 20 mA input, Undervoltage Autorestart, Diagnostics	S: RS485 Modbus RTU (standard) 1: Standard control & event recorder + undervoltage autorestart C: 2 × 10 A Relay form A + 6 × Digital Input 60 – 300 VAC A: 3-phase current and thermal O/L, undercurrent, single phase underpower
						(16 inputs total)	(18 inputs total) Note: An analog input option is not available with MM300
Option 2				2		Option 2: Examples: MM2-PD-1-2-120/240 MM2-C-1-0-120/240	Suggested order code for both examples: MM300-GEHS-1-C-A-C-X-X-X S: RS485 Modbus RTU (standard) 1: Standard control & event recorder + undervoltage autorestart C: 2 × 10 A Relay form A + 6 × Digital Input 60 – 300 VAC A: 3-phase current and thermal O/L, undercurrent, single phase underpower
						Process control (6 inputs), 2 programmable switch inputs, Enhanced protection, power (kW), thermistor, 2nd contactor control, (8 inputs total)	(12 inputs total) Note: An analog input option is not available with MM300
Control Power					120	120 V AC Control Voltage	H: 60 – 300 - VAC (80 – 250 VDC)
					240	240 V AC Control Voltage	H: 60 – 300 - VAC (80 – 250 VDC)

Notes: If **MOD 603** - ESD (Emergency Shut Down Relay) is used in the MM2, then the MM300 Order Code should include Flexlogic (option 3), and Expansion Modules D and E. Other MM2 and MM3 MODs may be available for MM300 units. Please contact the factory for more information.
Sample Order Codes

MM2 ORDER CODE	MM300 ORDER CODE
MM2-C-1-0-120/240 (14 inputs)	MM300-XEHS-1-C-A-C-C-X-X
MM2-C-0-2-120/240 (8 inputs)	MM300-XEHS-1-C-A-C-X-X-X
MM2-PD-1-2-120/240 (16 inputs)	MM300-GEHS-1-C-A-C-C-X-X

The MM300 can be mounted on a standard panel mount or DIN rail mount (or screw mount for high vibration environments). When replacing an MM2 unit, a panel mount is suggested.

MM2 Option Comparison

	STANDARD	OPTION 1 ADDS	OPTION 2 ADDS
Protection & Control	OVERLOAD (49/51) PHASE UNBALANCE (46) WELDED/OPEN CONTACTOR	UNDERVOLTAGE AUTO RESTART	GROUND FAULT (50G/51G), RAPID TRIP LOCKED/STALLED ROTOR (48) OVERTEMPERATURE THERMISTOR (49) UNDERCURRENT/UNDERPOWER (37) OVERVOLTAGE (59)/UNDERVOLTAGE (27)
Inputs	4 Control 2 Programmable	8 Programmable 1 Analog	2 Control Thermistor Input
			Single-phase voltage input for kW and kWh
Relays Mounting Configurations	Contactor control (A)	Auxiliary 1 and 2	Contactor control (B)
	Chassis Mount	Chassis Mount	Chassis Mount
		Panel mount with display available when both options are ordered	

REAR OF PANEL

MM3 to MM300 Ordering

	MM3	*	*	*	*		MM300 Matching Order Codes
Base Unit	MM3					Basic unit	MM300
Option 1		1				1: Basic Unit Example: MM3-1-E-W-240 Protection: Three Phase Overload Protection, Phase Unbalance, Welded / Open Contactor, Ground Fault Trips, Stalled Rotor Protection Display kW and kWh, Undercurrent / Underpower, Overvoltage, Undervoltage Inputs: 4 Control Inputs, 2 Programmable Inputs Relays: Contactor A, Aux 1, Aux 2 or ESD Relay	Suggested order code based on the example: MM300-GEHS-S-C-A-C-E-X (Any MM300 with one Expansion Module C meets all input requirements.) C: 2 × 10 A Relay form A + 6 × Digital Input 60 – 300 VAC Note: An analog input option is not available with the MM300
Option 2			2			2: Full Unit Example: MM3-2-E-N-120 Protection: Three Phase Overload Protection, Phase Unbalance, Welded / Open Contactor, Ground Fault Trips, Stalled Rotor Protection Display kW and kWh, Undercurrent / Underpower, Overvoltage, Undervoltage Inputs: 6 Control Inputs, 10 Programmable Inputs, Thermistor Input, Analog-in Input, Analog Output Relays: Contactor A, Contactor A , Aux 1, Aux 2 or ESD Relay	Suggested order code based on the example: MM300-XEHS-S-C-A-C-C-E-X (Any MM300 with three Expansion Module C options meets all input requirements.) C: 2 × 10 A Relay form A + 6 × Digital Input 60 – 300 VAC Note: An analog input option is not available with the MM300
				E		E: ESD (Emergency Shut Down) Relay ESD is used to determine whether a STOP is due to an Emergency. The ESD relay can only be energized and de-energized via terminals 34 & 35. The MM3 determines an ESD stop by monitoring the status of the ESD relay and the motor contactors via feedback into the Contactor A Status and Contactor B Status terminals. If either of the motor contactors drop out at the same time as the ESD de-energizes, an ESD stop occurs and the MM3 displays the message "ESD STOP". The ESD Output can be set as "Latched" or "Unlatched".	In MM300, output latching is achieved through Flexlogic programming. The MM300 Order Code should include Flexlogic (option 3), and Expansion Modules D and E. For example: MM300-GEHS-3-C-A-C-C-E-D 3: Standard control & event recorder + undervoltage autorestart + waveform capture & datalogger + FlexLogicTM D: 4 × 10A form-C relays (Expansion Slot C) E: 2 × 10A form-A relays and six (6) 20 to 60V DC digital Inputs (Expansion Slot D) Note: An analog input option is not available with the MM300
				A		A: Auxiliary 2 Relay Example: MM3-1-A-W-240 The AUX 2 relay can be internally energized by the MM3, or externally energized by applying a +24 V DC signal to these terminals. Correct polar ity is required. In an MM300, there is no direct way to energize an output relay by applying 24 V DC Voltage. Instead this is achieved by using a DC Input whose closure results in closing an output relay.	Suggested order codes based on the example: MM300-GEHS-S-C-A-C-E-D If AUX2 Relay is externally operated MM300-GEHS-S-C-A-C-C-D-X If AUX2 Relay is internally operated For an external wet (24 V DC) Aux 2 Relay, use Expansion Module E. If the Aux 2 is internally operated (by the MM3 CPU), Expansion Module D is adequate. Note: An analog input option is not available with the MM300
Display				W N		W: With Local Display N: No Display (chassis unit)	G: Graphical Control Panel with USB X: No control panel
Control Power					120 240	20 VAC Control Voltage 240 VAC Control Voltage	H: 60 – 300 - VAC (80 – 250 VDC) H: 60 – 300 - VAC (80 – 250 VDC)

Notes: The MM3 the Maximum AC Voltage that can be applied to Input / Output Modules is 380 V AC; In MM300 this limit is 300 V AC.

The MM3 does not have CT Inputs. Instead it sniffs Motor Power Supply through its built-in CT Module. The MM3 CT Module can "sniff" the motor full load amperage up to a maximum of 250 Amps. Therefore, when MM3 is replaced with MM300s, CTs also need to be introduced into the system.
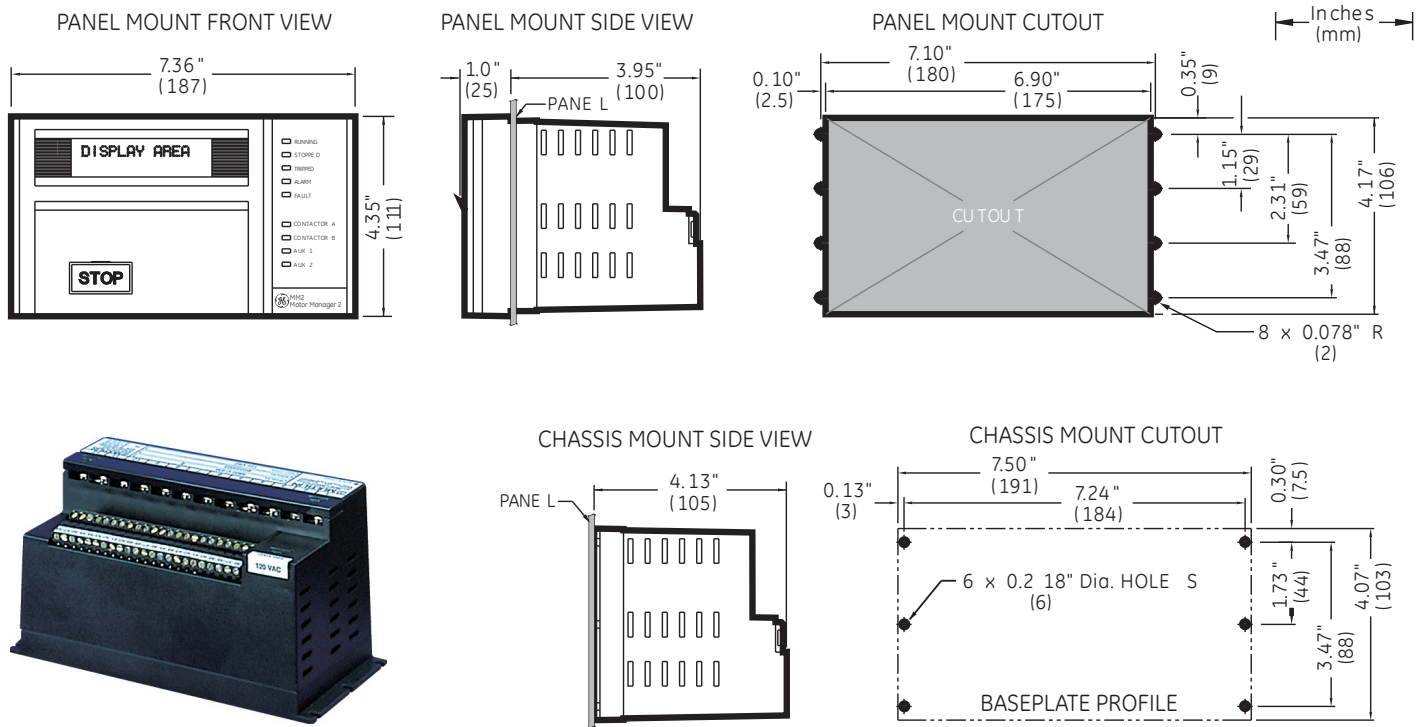

MM2 and MM3 MODs may be available for MM300 units. Please contact the factory for more information.

The MM300 can be mounted on a standard panel mount or DIN rail mount (or screw mount for high vibration environments). When replacing an MM3 unit, a DIN rail mount is suggested.
MM2 Dimensions & Mounting

The MM2 is a stand-alone unit with different dimensions for the panel mount and chassis mount options.

MM300 DIN Rail Mount

Profibus or DeviceNet
Optional fieldbus protocols

RS485 Communications and Thermistor Input

3 Phase + Residual Ground CT Inputs

Expansion module
to base unit with a single connector

Optional 3-phase Voltage Module

Switched Power Supply
allows AC or DC control voltage

RTD Module
with three RTD inputs

Optional TCP / IP Ethernet

Core Balance Ground CT Input

I/O card includes:
• 2 Contactor Outputs (Form A)
• 6 Programmable inputs
• Single Phase VT input (60-300Vac)

Expansion Module
allows additional Digital I/O, RTD, or Voltage inputs

To replace an MM3, an MM300 DIN rail mount is suggested. The DIN rail mount configuration requires a longer Connector cable, available in 3 ft. or 6ft. lengths:
0804-0169: *MM300 3 ft. Connector Cable*
**0804-0172**: *MM300 6 ft. Connector Cable*

# MM3 to MM300 Retrofit Example

MM3
Once the MM3 unit is removed, a supporting plate is installed in the chassis using the existing MM3 mounting holes. A DIN rail is then installed to support the MM300
The new MM300 unit is mounted on the DIN rail. No new holes are required in the chassis.

New external CTs are installed in the conductor assembly, replacing the built-in MM3 CTs.
The MM300 graphic display is mounted in the existing MM3 display cutout. A blanking plate adjusts the cutout size.

The retrofit MM300 awaits electrical connection.

- No modifications or new holes in chassis
- No changes to the terminal BUS connections and outgoing feeder

MM300

GE's Projects and Professional Service

GE has developed a Professional Services Process . The process is comprehensive, application specific, and includes customer collaboration for successful project implementation. GE's Professional Services Process is based on a common set of building blocks, utilized and tailored for each customer's unique communication network requirements. While GE uses well documented and repeatable processes, we realize that flexibility is also key to accommodate our customer's specific requirements and needs unique to their environment.

Dedicated Project Management

GE assigns a project manager at the beginning of each project to lead the team throughout the project lifecycle. The project manager acts as an extension of the customer's team to coordinate and drive all aspects of the project to a successful outcome.

Global Capabilities

GE's dedicated engineering teams are located in regions around the world and bring a wealth of international experience to every project. Customers benefit from GE's local systems subject matter experts who drive compliance with regional/local requirements ensuring our customers business and technical objectives are met. GE has an excellent track record in planning, executing and delivering a broad range of projects. GE's systems subject matter experts work in state-of-the-art facilities that include design, research and development, manufacturing and testing capabilities. Customer are supported with 24/7 field and application support.

Professional Services Offerings and Activities

Conventional Control Systems • Packaged Solutions • Protection Panels Projects • RTU Centric Panel Engineering	• Standard pre-designed protection and RTU panels • Design to specification protection and control panels • Legacy retrofit solutions • Protection and Control System design • Drop in Control House
Digital Control Systems • Substation Automation Engineering Substation Automation Projects • Integrated Energy Management Systems • Microgrids	• Automation and Protection project design and build • Local HMI through complex substation SCADA Solutions • WAMS / Synchrophasers Implementation • Integrated Energy Monitoring Systems implementation and custom applications • RTU upgrade engineering
Technical Expertise	• Power system studies • System setting studies • Real Time Digital Simulation and modelling • Complex system design (Fast Load Shedding, Remedial Action Schemes, Synchrohpasor and Microgrid Project Design) • NERC Compliance Support • Modified field drawings • Setting and configuration • Monitoring & Diagnostic, Process Bus Consulting Services
Technical Services	• Training • Commissioning & Field Service • Maintenance Contracts • Life Cycle Management Services • Designed, build and tested in house with customer settings if needed
