GL 316 / GL 316X

Live Tank Circuit Breakers for 420 kV

Live tank circuit breakers for outdoor installations feature third-generation self-blast interrupter chambers and spring-operated mechanisms (FK). The field-proven interrupter chamber operates on the basis of the energy-optimised self-blast principle. The FK3 type mechanisms equip the entire range of circuit breakers with more than 250,000 references worldwide.

High Quality Components

- · Single pole operating design
- · Two self-blast interrupting chambers per pole
- · Spring mechanism FK3 equipped with position indicator visible from outside
- Field-proven temperature-compensated density monitor with two-stage transducer and three-colour dial
- Easy access to the SF₆ filling connection (type DILO)
- Sealings suitable for temperatures down to -60 °C
- Hot-dip galvanized steel parts and mechanism housing completely of aluminum

Options for Customization

- Standard low voltage equipment provided, additional equipment is available
- · Composite insulators available
- Seismic dampers for high seismic request can be provided
- · Pressure relief system for passive protection of both substation and personnel
- RPH3 controller point-on-wave tripping and closing relays
- CBWatch compact and modular circuit breaker monitoring solution
- Closing resistors solution (GL 316D) to limit high and damaging overvoltages
- · Grading capacitors depending on specifications

Enhanced Installation and Maintenance

- Preset at factory prior shipping no adjustments during installation or commissioning
- Disassembly of interrupter chamber without removal of entire pole column possible

Rigorous Testing

GE Vernova's live tank circuit breakers meet the requirements of national and international standards. This has been confirmed by comprehensive type tests based on the latest versions of IEC standards.

High Performance

Live tank SF_6 circuit breakers use self-blast technology and benefit from latest technological developments as well as ourfield-proven, time tested experience in high voltage switchgear in accordance with the IEC 62271-100 standard.

Superior Manufacturing

GE Vernova's entire development and production procedures for ourlive tank circuit breakers are fully compliant with the latest ISO 9001, ISO 14001 and OHSAS 18001 quality standards. This ensures the high quality of our products and services and is confirmed by regular audits.

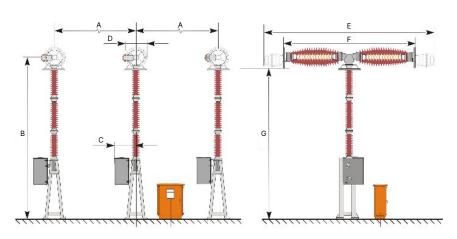

Key Benefits

- High mechanical endurance and very low restrike probability according to IEC 62271-100 class M2 & C2
- Disconnecting option for easy and fast installation
- Closing resistor located in the same gas volume as breaking chamber

Dimensions

| | A | В | С | D | E | F | G |
|--------------------|-------|-------|-----|-------|-------|-------|-------|
| GL 316 / GL 316X | 5,300 | 6,612 | 931 | 1,026 | N/A | 4,899 | 6,099 |
| GL 316D / GL 316XD | 5,300 | 6,612 | 931 | 1,026 | 6,442 | 4,899 | 6,099 |

Gas Data*

The functioning of this equipment relies upon SF₆, a fluorinated greenhouse gas.

| | SF ₆ |
|--|-----------------|
| Average mass of gas/mixture in the equipment (kg)* | 40.6 |
| GWP ₁₀₀ of gas/mixture (C0 ₂ -equivalent) | 24,300 |
| ${\rm CO_2}{\text{-eq}}$ of gas/mixture in the equipment $({\rm t_{co2\text{-eq}}})^*$ | 986.6 |

^{*}For information purposes only. It varies depending on the equipment considered.
