

GE Vernova to equip two RWE wind farms in Texas with over 100 turbines, boosting US jobs and energy security

- Wind farms will use 109 of GE Vernova's 2.8 MW-127m workhorse wind turbines
- Deal will support hundreds of construction jobs and advanced manufacturing jobs
- Projects show how wind power can create US jobs and bolster energy security

SCHENECTADY, NY (March 18, 2025) - GE Vernova Inc. (NYSE: GEV) announced today that it has entered into an agreement with RWE to provide 109 of its 2.8 MW-127m* onshore wind turbines to power the Honey Mesquite wind farm in Glasscock County, Texas and repower the Forest Creek Wind Farm near Big Spring, Texas. The Forest Creek deal was booked in the second quarter of 2024, and the Honey Mesquite order was booked in the third quarter of 2024. Deliveries of the wind turbines for both projects are scheduled to begin later this year.

The projects will bring RWE's rebuilt and repowered wind capacity across the U.S. to more than 1 gigawatt (GW). RWE estimates the wind farms will support about hundreds of full-time jobs during peak construction and will generate enough electricity to power the equivalent of more than 85,000 homes and business annually in Texas. The projects also supports several hundred long-term, advanced manufacturing jobs at GE Vernova's Pensacola facility that will supply equipment used at the wind farms.

GE Vernova is leveraging its robust domestic supply chain and manufacturing capabilities for this project, with the nacelles for the turbines being produced at GE Vernova's facility in Pensacola, Florida. This manufacturing facility supports U.S.

energy abundance, affordability, and security, and employs a workforce comprising approximately 20 percent veterans, highlighting GE Vernova's dedication to both fostering local job creation and honoring those who have served the United States.

Scott Stalica, Executive Director, North American Commercial Operations, GE Vernova's Onshore Wind business, said: "We are pleased to have an opportunity to support a leader in the wind industry and appreciate RWE's confidence in our business, our technology, and our people. These projects are another example of how wind power can support the country's growing energy needs, while creating U.S. jobs and bolster energy security."

Kevin Kroll, Chief Operating Officer, RWE Clean Energy: "RWE's investments in West Texas symbolize our steadfast commitment to producing homegrown energy and strengthening U.S. manufacturing and supply chains through our partnerships with great American companies like GE Vernova. Together, we are contributing to American energy dominance and we are fostering continued economic opportunity and job creation in rural communities across the country."

GE Vernova's Onshore Wind has a total installed base of approximately 56,000 turbines and nearly 120 GW of installed capacity worldwide. Committed to its customers' success for more than two decades, its product portfolio offers next-generation high-powered turbines at scale that drives decarbonization through high-quality, affordable, and sustainable renewable energy.

###

*Note to Editors: GE's 2.8 MW turbine with a 127 meter rotor is what we refer to as the 2.8 MW-127m.

About GE Vernova

GE Vernova Inc. (NYSE: GEV) is a purpose-built global energy company that includes Power, Wind, and Electrification segments and is supported by its accelerator businesses. Building on over 130 years of experience tackling the world's challenges, GE Vernova is uniquely positioned to help lead the energy transition by continuing to electrify the world while simultaneously working to decarbonize it. GE Vernova helps customers power economies and deliver electricity that is vital to health, safety, security, and improved quality of life. GE Vernova is headquartered in Cambridge, Massachusetts, U.S., with approximately 85,000 employees across approximately 100 countries around the world. Supported by the Company's purpose, The Energy to Change the World, GE Vernova technology helps deliver a more affordable, reliable, sustainable, and secure energy future.

GE Vernova's Wind segment is focused on delivering a suite of wind products and services to help accelerate a new era of energy by harnessing the power of wind. Technologies provided to customers include the next generation high efficiency 3-megawatt onshore wind turbine and the Haliade-X offshore wind turbine platform, as well as maintenance solutions and life extension optionality.

Forward-Looking Statements

This document contains forward-looking statements – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. These forward-looking statements often address GE Vernova's expected future business and financial performance and financial condition, and the expected performance of its products, the impact of its services and the results they may generate or produce, and often contain words such as "expect,"

“anticipate,” “intend,” “plan,” “believe,” “seek,” “see,” “will,” “would,” “estimate,” “forecast,” “target,” “preliminary,” or “range.” Forward-looking statements by their nature address matters that are, to different degrees, uncertain, such as statements about planned and potential transactions, investments or projects and their expected results and the impacts of macroeconomic and market conditions and volatility on the Company’s business operations, financial results and financial position and on the global supply chain and world economy.
