GE Vernova and BBWind sign 20th agreement to supply onshore wind turbines to local community windfarms

- GE Vernova's Wind segment will provide three additional onshore wind turbines to BBWind
- Projects will use GE Vernova's 6.0 MW-164m workhorse turbines
- Deals leverage GE Vernova's manufacturing capacity in Salzbergen

COPENHAGEN, DENMARK (April 9, 2025) - GE Vernova's Wind segment announced today that it has signed agreements to supply three of its 6.0 MW-164m* workhorse wind turbines to community wind farms consulted by BBWind. BBWind is a wind farm developer based in Muenster, Germany, consulting on regional community wind projects. This is the 20th agreement that the two companies have signed for projects being developed by BBWind.

The deals, which were booked in the first quarter of 2025, will support the two turbine 12 MW wind farm in Heiden and the 6 MW Dorsten project in the North Rhine-Westphalia region in Western Germany.

GE Vernova's Wind segment has a strong manufacturing presence in Germany with a 70,000 square meter facility in Salzbergen that manufactures machine heads, drive trains, and hubs for the workhorse turbines it provides to customers in Germany and elsewhere in Europe and Asia.

Germany installed approximately 3.2 GW of onshore wind in 2024 and is looking to accelerate the development of onshore wind as part of its plan to get up to 80 percent of its power from renewable energy resources by 2030.

Gilan Sabatier, GE Vernova's Chief Commercial Officer for onshore wind, international markets said, "We are pleased to have the opportunity to support BBWind in their efforts to develop community-led wind farms in communities close to our manufacturing facility in Salzbergen. Our workhorse turbines are ideally suited to meet the needs of Germany's rapidly growing onshore wind sector and our teams in Salzbergen are ready to contribute to the country's ambitious wind energy goals."

Michael Schluess, CEO BBWind, said, "We are pleased by the close cooperation with our partner GE Vernova, who over the last years has a key contributor to the successful implementation of the locally owned community wind farms of our customers. Besides the 20 projects already implemented or under construction, we are looking forward to continuing our close cooperation with further projects in the coming years."

GE Vernova's Wind segment has a total installed base of approximately 57,000 turbines and more than 120 GW of installed capacity worldwide. Committed to its customers' success for more than two decades, its product portfolio offers the next-generation high-powered turbines at scale that drives decarbonization through high-quality, affordable, and sustainable renewable energy.

###

*Note to Editors: GE Vernova's 6.0 MW turbine with a 164 meter rotor is what we refer to as the 6.0MW-164m.

About GE Vernova

GE Vernova Inc. (NYSE: GEV) is a purpose-built global energy company that includes Power, Wind, and Electrification segments and is supported by its accelerator businesses. Building on over 130 years of experience tackling the world's challenges, GE Vernova is uniquely positioned to help lead the energy transition by continuing to electrify the world while simultaneously working to decarbonize it. GE Vernova helps customers power economies and deliver electricity that is vital to health, safety, security, and improved quality of life. GE Vernova is headquartered in Cambridge, Massachusetts, U.S., with approximately 75,000 employees across approximately 100 countries around the world. Supported by the Company's purpose, The Energy to Change the World, GE Vernova technology helps deliver a more affordable, reliable, sustainable, and secure energy future.

GE Vernova's **Wind** segment is focused on delivering a suite of wind products and services to help accelerate a new era of energy by harnessing the power of wind. The business comprises the Offshore Wind, Onshore Wind, and LM Wind Power businesses. Technologies provided to customers include the Haliade-X platform, our offshore wind turbine, and the next generation high efficiency 3-megawatt onshore wind turbine, as well as maintenance solutions and life extension optionality.

Forward-Looking Statements

This document contains forward-looking statements – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. These forward-looking statements often address GE Vernova's expected future business and financial performance and financial condition, and the expected performance of its products, the impact of its services and the results they may generate or produce, and often contain words such as "expect," "anticipate," "intend," "plan," "believe," "seek," "see," "will," "would," "estimate," "forecast," "target," "preliminary," or "range." Forward-looking statements by their

nature address matters that are, to different degrees, uncertain, such as statements about planned and potential transactions, investments or projects and their expected results and the impacts of macroeconomic and market conditions and volatility on the Company’s business operations, financial results and financial position and on the global supply chain and world economy.
