

GE Vernova Adding 250 New Jobs as Part of Pennsylvania Factory Expansion to Manufacture More Critical Grid Technologies

- New jobs at company's Charleroi, PA factory will help manufacture additional high voltage switchgear products essential to operation of the country's electric grids
- GE Vernova has now announced plans to create a total of 1,750 new U.S. jobs and to make \$680 million in U.S. investments since January
- Company also has secured an order to provide seven of its high efficiency natural gas turbines to the Homer City, PA Energy Campus

Over next two years company creating approximately 700 new jobs across multiple factories

and investing up to \$100 million in Pennsylvania

Cambridge, MA (July 15, 2025) - As energy demand continues to surge, GE Vernova (NYSE: GEV) plans to add 250 new jobs over the next two years at the company's leading grid solutions factory in Charleroi, PA.

The new roles will help manufacture more high voltage switchgear products, which are critical components for stable and reliable operation of the nation's electrical grids.

GE Vernova now plans to invest up to \$100 million in Pennsylvania over the next two years, adding approximately 700 new jobs across multiple factories in the state

that will help modernize the grid for economic growth, strengthen domestic supply chains, and boost national security.

This new Charleroi factory expansion builds on the company's [\\$600 million multi-year investment](#) announced in January, originally expected to create a total of 1,500 new jobs across numerous U.S. factories.

“Powering the grid is at the core of powering America’s economy,” said Scott Strazik, CEO of GE Vernova. “These new jobs and investment reflect our ongoing commitment to not only building critical grid infrastructure with American workers, but reindustrializing Pennsylvania’s proud manufacturing legacy. They will also help strengthen our domestic supply chain, improve national security, and boost global competitiveness by closing a crucial gap.”

“We are investing in Charleroi and our advanced grid technology because it complements the investments we've made in power generation,” Strazik continued. “For the US to lead in energy, manufacturing critical domestic grid infrastructure is just as important generation.”

In addition to the new investment in its Charleroi facility, GE Vernova also announced it has secured a full order to provide seven of its high efficiency 7HA.02 natural gas turbines to the Homer City Energy Campus. The facility, once the largest coal plant in Pennsylvania, will provide up to 4.4GW of electricity to power what will become a more than 3,200-acre natural gas-powered data center campus, designed to meet the growing artificial intelligence (AI) and high-performance computing (HPC) needs of the innovative technology companies shaping America’s digital future. The Homer City Energy Campus is expected to be completed in 2027. ***

“The Homer City project shows what smart energy investments can achieve — delivering more reliable, affordable power for all, creating thousands of skilled jobs, and positioning Pennsylvania to help lead the next era of AI,” Strazik added.

The approximately \$100 million of new investments in Pennsylvania over the next two years are part of a larger \$9 billion cumulative global capex and R&D

investment plan through 2028 that was announced at the company's Investor Update in December 2024.

Currently GE Vernova's technology helps produce more than half of the power in the United States, and the company has more than 18,000 workers across 50 states and 18 U.S. manufacturing facilities.

###

*****For financial editors:** the seven 7HA.02 gas turbines were announced as slot reservation agreements on April 2, 2025. These units have since moved to a secured order in 3Q25.
