

GE Vernova announces onshore wind turbine order with Prokon in Germany

- The project will feature eight GE Vernova 6MW -164m workhorse turbines
- The deal reflects the success of GE Vernova's "Workhorse Product Strategy" including a high reliability and availability of the GE Vernova onshore wind fleet in Germany
- Project leverages GE Vernova's manufacturing facility in Salzbergen

SALZBERGEN, Germany (September 16, 2025) - GE Vernova Inc. (NYSE: GEV) announced today that it has signed an agreement with Prokon Regenerative Energien eG to repower a wind farm with eight 6MW-164m turbines produced at its factory in Salzbergen, Germany. The deal was booked in the second quarter of 2025. The workhorse turbines will be installed in the Fleetmark community in Sachsen-Anhalt, Germany.

Gilan Sabatier, Chief Commercial Officer for GE Vernova's Onshore Wind business in International Markets, said, "We are pleased to once again work with Prokon to support their strategy to grow the profitable generation of renewable power and advance Germany's broader renewable energy goals. Repowering existing sites produces more power from current wind farms, strengthening their ability to meet local energy needs in a sustainable manner. With our industrial footprint in Salzbergen, we are well positioned to serve our customer's needs to grow Germany's onshore wind power production."

Katharina Beyer, Board Member for Project Development at Prokon, added: "As an energy cooperative, our ambition is to implement projects that are ecologically sound, economically viable, and transparent for the local communities."

Our experiences in Friedersdorf and Langenbach have shown that GE Vernova's turbines operate reliably and deliver stable yields. On this basis, we have again chosen this turbine type for our Fleetmark project. For us, what matters is not only the technology itself but also a professional and constructive collaboration throughout the entire planning and construction process. Together, we are laying the foundation to reliably supply our members and customers with clean electricity and therefore make a tangible contribution to the German energy transition."

GE Vernova's Wind segment has a strong manufacturing presence in Germany with a 70,000 square meter facility in Salzbergen that manufactures machine heads, drive trains, and hubs for the workhorse turbines it provides to customers in Germany and elsewhere in Europe and Asia.

Germany installed approximately 3.2 GW of onshore wind in 2024 and is expected to accelerate the development of onshore wind as part of its plan to get up to 80 percent of its power from renewable energy resources by 2030.

GE Vernova has a total installed base of approximately 57,000 turbines and nearly 120 GW of installed capacity worldwide. Committed to its customers' success for more than two decades, its product portfolio offers the next-generation high-powered turbines at scale that drives decarbonization through high-quality, affordable, and sustainable renewable energy.

###

*Note to Editors: GE Vernova's 6 MW turbine with a 164-meter rotor is what we refer to as the 6MW-164m.

About Prokon

Prokon Regenerative Energien eG, with more than 40,000 members, is one of the largest energy cooperatives in Europe and has been contributing to the energy transition for nearly 30 years. Founded in 1995 and owned by its members since 2015, Prokon focuses on citizen-oriented renewable power generation and supply. The cooperative's core expertise lies in the development, planning, and operation of onshore wind farms, complemented by the nationwide supply of households with

green electricity. In addition, Prokon is expanding into photovoltaics, battery storage, and biomethane. With 77 wind farms and a total capacity of more than 1,000 MW in Germany, Poland, and Finland (as of April 2025), Prokon combines technical know-how with cooperative values to deliver sustainable, community-based energy solutions.

About GE Vernova

GE Vernova Inc. (NYSE: GEV) is a purpose-built global energy company that includes Power, Wind, and Electrification segments and is supported by its accelerator businesses. Building on over 130 years of experience tackling the world's challenges, GE Vernova is uniquely positioned to help lead the energy transition by continuing to electrify the world while simultaneously working to decarbonize it. GE Vernova helps customers power economies and deliver electricity that is vital to health, safety, security, and improved quality of life. GE Vernova is headquartered in Cambridge, Massachusetts, U.S., with approximately 75,000 employees across approximately 100 countries around the world. Supported by the Company's purpose, The Energy to Change the World, GE Vernova technology helps deliver a more affordable, reliable, sustainable, and secure energy future.

GE Vernova's **Wind** segment is focused on delivering a suite of wind products and services to help accelerate a new era of energy by harnessing the power of wind. The business comprises the Offshore Wind, Onshore Wind, and LM Wind Power businesses. Technologies provided to customers include the Haliade-X platform, our offshore wind turbine, and the next generation high efficiency 3-megawatt

onshore wind turbine, as well as maintenance solutions and life extension optionality.

Forward-Looking Statements

This document contains forward-looking statements – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. These forward-looking statements often address GE Vernova’s expected future business and financial performance and financial condition, and the expected performance of its products, the impact of its services and the results they may generate or produce, and often contain words such as “expect,” “anticipate,” “intend,” “plan,” “believe,” “seek,” “see,” “will,” “would,” “estimate,” “forecast,” “target,” “preliminary,” or “range.” Forward-looking statements by their nature address matters that are, to different degrees, uncertain, such as statements about planned and potential transactions, investments or projects and their expected results and the impacts of macroeconomic and market conditions and volatility on the Company’s business operations, financial results and financial position and on the global supply chain and world economy.
