

GE Vernova to provide grid-stabilizing technology for Transgrid to support renewables rollout in Australia

SYDNEY, Australia – November 06, 2025 –

- GE Vernova Inc. (NYSE: GEV) has signed a contract with Transgrid for the supply of synchronous condensers, highly-sought-after equipment that will assist in stabilising the New South Wales (NSW) grid as it transitions from coal to renewables.
- Synchronous condensers and associated systems to be supplied across five strategic sites on the NSW transmission network
- These machines play a critical role in stabilizing modern electricity networks by providing inertia, voltage control, and fault current — functions traditionally supplied by large coal-fired generators. By replicating this stabilizing effect, these machines enable higher penetration of renewable energy sources such as wind and solar, improving overall system performance and reducing costs for consumers.
