GE Vernova to supply 29.4 MW of wind capacity for Eurus Energy’s Hiyamizutouge Project in Japan

- Order features 4.2MW workhorse turbines designed to deliver reliable performance in Japan’s unique wind conditions
- Deal accelerates GE Vernova’s momentum in Japan’s expanding wind market
- GE Vernova technology powers approximately 50% of the country’s installed heavy-duty gas turbine capacity and 25% of its onshore wind capacity.
- Workhorse strategy features standardized, industrialized machines engineered for repeatable execution and long-term reliability

TOKYO, Japan (September 15, 2026) – GE Vernova (NYSE: GEV) announced today that its Onshore Wind business has signed an agreement* with Eurus Energy Holdings Corporation (Eurus Energy) to supply seven 4.2 MW-117m** wind turbines for the 29.4 MW Eurus Hiyamizutouge Wind Farm in Mutsu City and Higashidori Village, Aomori Prefecture, Japan. The deal includes a two-year service agreement with an option for a two-year extension.

The 4.2 MW-117m turbines are part of GE Vernova’s workhorse 4 MW platform, with over 2 million operating hours, this turbine has been specifically engineered to deliver high-output, reliable performance in Japan’s unique wind conditions.

"We are pleased to partner once again with Eurus Energy to bring the Hiyamizutouge project to life," said **Gilan Sabatier, Chief Commercial Officer of Onshore Wind, International Markets at GE Vernova**. "Our 4 MW platform is well-suited to the Japanese landscape, offering the durability and efficiency required to maximize the country’s wind potential. GE Vernova technology

currently powers 25% of Japan's installed wind capacity, and we remain dedicated to supporting the nation’s energy transition."

Masaru Akiyoshi, Representative Director and Executive Vice President, Eurus Energy said, “We are pleased to once again partner with GE Vernova on a renewable energy project in Japan. We are grateful to the people of Mutsu City and Higashidori Village, the administrative agencies, and all stakeholders for their support. We look forward to building this new wind farm in Aomori together and contributing to Japan’s renewable energy goals through our continued collaboration”.

This project contributes to Japan’s ambitious goal of generating 36–38% of its electricity from renewable sources by 2030. GE Vernova and Japan's Ministry of Economy, Trade and Industry (METI) launched a joint focus group on June 10, 2025, aimed at addressing challenges and opportunities and deepening collaboration in energy security and innovation.

This announcement follows a period of strong momentum for GE Vernova in Japan, where the company has secured 339 MW of orders in 2025 across a diverse customer base, including established utilities and emerging independent power producers. GE Vernova and its technologies contribute significantly to Japan’s overall electric capacity, accounting for around 50% of the country’s installed Heavy-Duty Gas Turbine power generation capacity and 25% of the country’s onshore wind capacity.

GE Vernova's Wind segment’s portfolio reflects a deliberate workhorse strategy — standardized, industrialized machines engineered for repeatable execution and long-term reliability. With more than 59,000 turbines operating globally, its experience informs every product it designs, manufactures, and deploys.

Notes to editor:

**The order was booked in the second quarter of 2026.*

***GE Vernova's 4.2MW turbine with a 117-meter rotor is referred to as the 4.2MW–117m.*

About GE Vernova

GE Vernova Inc. (NYSE: GEV) is a purpose-built global energy company that includes Power, Electrification and Wind segments and is supported by its accelerator businesses. Building on over 130 years of experience tackling the world's challenges, GE Vernova is uniquely positioned to help lead the energy transition by continuing to electrify the world while simultaneously working to decarbonize it. GE Vernova helps customers power economies and deliver electricity that is vital to health, safety, security, and improved quality of life. GE Vernova is headquartered in Cambridge, Massachusetts, U.S., with approximately 85,000 employees across approximately 100 countries around the world. Supported by the Company's purpose, The Energy to Change the World, GE Vernova technology helps deliver a more affordable, reliable, sustainable, and secure energy future.

GE Vernova's Wind segment is focused on delivering a suite of wind products and services to help accelerate a new era of energy by harnessing the power of wind. Technologies provided to customers include the next generation high efficiency 3-megawatt onshore wind turbine and the Haliade-X offshore wind turbine platform, as well as maintenance solutions and life extension optionality.

Forward-Looking Statements

This document contains forward-looking statements – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. These forward-looking statements often address GE Vernova's expected future business and financial performance and financial condition, and the expected performance of its products, the impact of its services and the results they may generate or produce, and often contain words such as "expect," "anticipate," "intend," "plan," "believe," "seek," "see," "will," "would," "estimate," "forecast," "target," "preliminary," or "range." Forward-looking statements by their nature address matters that are, to different degrees, uncertain, such as statements about planned and potential transactions, investments or projects and their expected results and the impacts of macroeconomic and market conditions and volatility on the Company's business operations, financial results and financial position and on the global supply chain and world economy.
