GE Vernova strengthens German wind energy expansion with new order from wpd

- With the new four turbine agreement, GE Vernova now supplies wpd with 132 MW of capacity in Germany
- Turbines to be built in GE Vernova’s Salzbergen factory, one of GE Vernova’s 13 locations across Germany
- Deal features a long-term service agreement
- Workhorse strategy features standardized, industrialized machines engineered for repeatable execution and long-term reliability

Salzbergen, Germany, *(November 17, 2026)* **–** GE Vernova (NYSE: GEV) announced today that it has signed an agreement with wpd to supply four of its 5.5 MW-158m onshore wind turbines for the Haseloff wind farm in Germany. The order includes a long-term service agreement, underscoring the commitment of both companies to supporting Germany’s ambitious renewable energy goals.

This marks the fifth project collaboration between the two companies using GE Vernova’s 6 MW class wind turbines, bringing wpd’s fleet of these workhorse turbines in Germany to 24, with a combined installed capacity of 132 MW. The delivery of the turbines is set to begin in November 2027, with commissioning scheduled for the first quarter of 2028.

"We are proud to continue our successful relationship with wpd, a company that shares our vision for a resilient and sustainable energy future," said Marcas Breatnach, Executive Sales Leader Northern Europe at GE Vernova. "With our proven workhorse technology, available with ratings up to 6.5 MW and proudly

manufactured at our Salzbergen facility, we deliver high-performance, mature technology backed by over 38 million operating hours across more than 2,100 units worldwide. Our local production strengthens a resilient supply chain and supports Germany’s energy transition with highly industrialized, reliable turbines made in Germany."

GE Vernova’s facility in Salzbergen remains a cornerstone of GE Vernova’s German footprint and celebrated a major milestone in May 2026 by reaching 25 GW of total produced wind power capacity. The site underscores GE Vernova’s deep commitment to the German market, where the company operates across 13 locations, providing a diverse energy transition footprint. This includes a transformer manufacturing facility in Mönchengladbach as well as other grid related production and R&D facilities.

This agreement builds on GE Vernova’s growing momentum in Germany, following its recently announced order from Stadtwerke Heidenheim AG for three onshore wind turbines.

GE Vernova's onshore portfolio reflects a deliberate workhorse strategy — standardized, industrialized machines engineered for repeatable execution and long-term reliability. With more than 59,000 turbines operating globally, its experience informs every product it designs, manufactures, and deploys.

**The order was booked in the fourth quarter of 2026.*

***GE Vernova’s 5.5 MW turbine with a 158-meter rotor is referred to as the* 5.5 MW-158m.

About GE Vernova

GE Vernova Inc. (NYSE: GEV) is a purpose-built global energy company that includes Power, Electrification and Wind segments and is supported by its accelerator businesses. Building on over 130 years of experience tackling the world's challenges, GE Vernova is uniquely positioned to help lead the energy transition by continuing to electrify the world while simultaneously working to decarbonize it. GE Vernova helps customers power economies and deliver electricity that is vital to health, safety, security, and improved quality of life. GE Vernova is headquartered in Cambridge, Massachusetts, U.S., with approximately 85,000 employees across approximately 100 countries around the world. Supported by the Company's purpose, The Energy to Change the World, GE Vernova technology helps deliver a more affordable, reliable, sustainable, and secure energy future.

GE Vernova's Wind segment is focused on delivering a suite of wind products and services to help accelerate a new era of energy by harnessing the power of wind. Technologies provided to customers include the next generation high efficiency 3-megawatt onshore wind turbine and the Haliade-X offshore wind turbine platform, as well as maintenance solutions and life extension optionality.

Forward-Looking Statements

This document contains forward-looking statements – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. These forward-looking statements often address GE Vernova's expected future business and financial performance and financial condition, and the expected performance of its products, the impact of its services and the results they may generate or produce, and often contain words such as "expect," "anticipate," "intend," "plan," "believe," "seek," "see," "will," "would," "estimate," "forecast," "target," "preliminary," or "range." Forward-looking statements by their nature address matters that are, to different degrees, uncertain, such as statements about planned and potential transactions, investments or projects and

their expected results and the impacts of macroeconomic and market conditions and volatility on the Company’s business operations, financial results and financial position and on the global supply chain and world economy.
