

“ – From an engineering project perspective, the plant’s technological upgrade is the largest project since the construction of the plant itself. That’s the magnitude of the project you are seeing here — a project with an approximate duration of 14 years. We are now entering the third year of execution.”

- I believe this project is one of the largest in terms of modernization and equipment refurbishment. Working together with Itaipu, alongside a highly qualified technical team that already has experience with other plants and components... I am deeply grateful for this opportunity.

- As an engineering professional, the greatest pride we can have is taking part, after the construction phase, in such an important moment for our plant, contributing to this modernization where the latest and most advanced technologies are being introduced.

It is truly a source of pride for us as professionals. The satisfaction of belonging to this moment, sincerely, is immense.”
